Make sure to be as smooth as possible

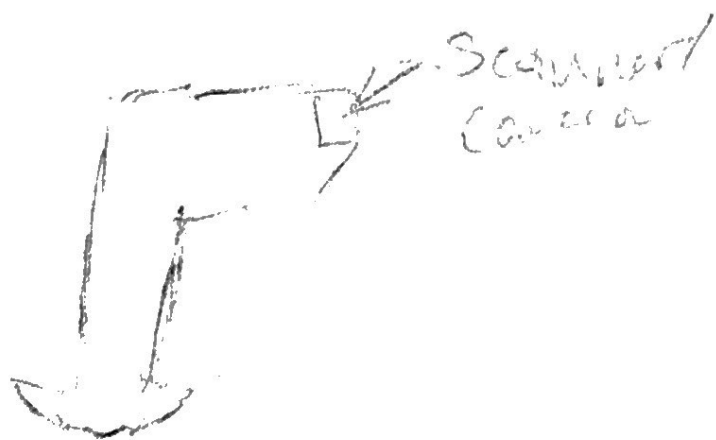

~~Possible~~ I.O.S. integration with a  
software application for admin to scan

I.O.T.

A collection of individual scanners that communicate with the main system or the web app  
portable

Mobile version)

Admin worker app - allows users to scan the ~~data~~ QR codes from phone to communicate main system or web app

- Styling need to decide what hex codes to use + font.
- No GPT with styling; it makes a mess of CSS and the regular HTML
- GPT can be use to help debug but it's important to make sure we understand what's going on in the code.
- Design should be similar to what's Developer both sides web/mobile
- Should split Admin + User to Different web sites and app
